BACKTEST REPORT · 8 MAR 2020 → 20 OCT 2026

BB Breakout strategy on 5 coins

$100 per coin · $5 risk per trade · all costs included

If you had put **$100 on each of SOL, ZEC, NEAR, ADA and GALA ($500 total)** and let the bot risk **$5 on every trade**, this is what the last 6.6 years would have looked like — after paying every trading fee, slippage and funding fee.

START → END
$500 → $2978.51
all 5 coins combined

TOTAL PROFIT
+$2478.51
+496% on $500

AVERAGE PER YEAR
+$374.47
+75% of $500 a year

WORST DROP (MAX DRAWDOWN)
−$128.00
7.8% from the peak · Jun 2022 → Nov 2022

LONGEST LOSING STREAK
20 trades in a row
cost −$100.88 · 20 Oct 2022 → 8 Nov 2022

ALL COSTS PAID
−$271.02
9.9% of the gross profit

The rules in plain words

- Looks at the **4-hour chart** only. A trade starts when a candle **closes outside the Bollinger Band** (20, 2) in the direction of the **200 average** (above it = long, below it = short).
- **Stop-loss** = the middle band. **Take-profit** = 4 × that distance (1:4). Both are fixed at entry and never moved.
- If neither is hit within **48 candles (8 days)**, the trade is closed at market.
- One trade at a time per coin. Size is set so hitting the stop loses about **$5**.

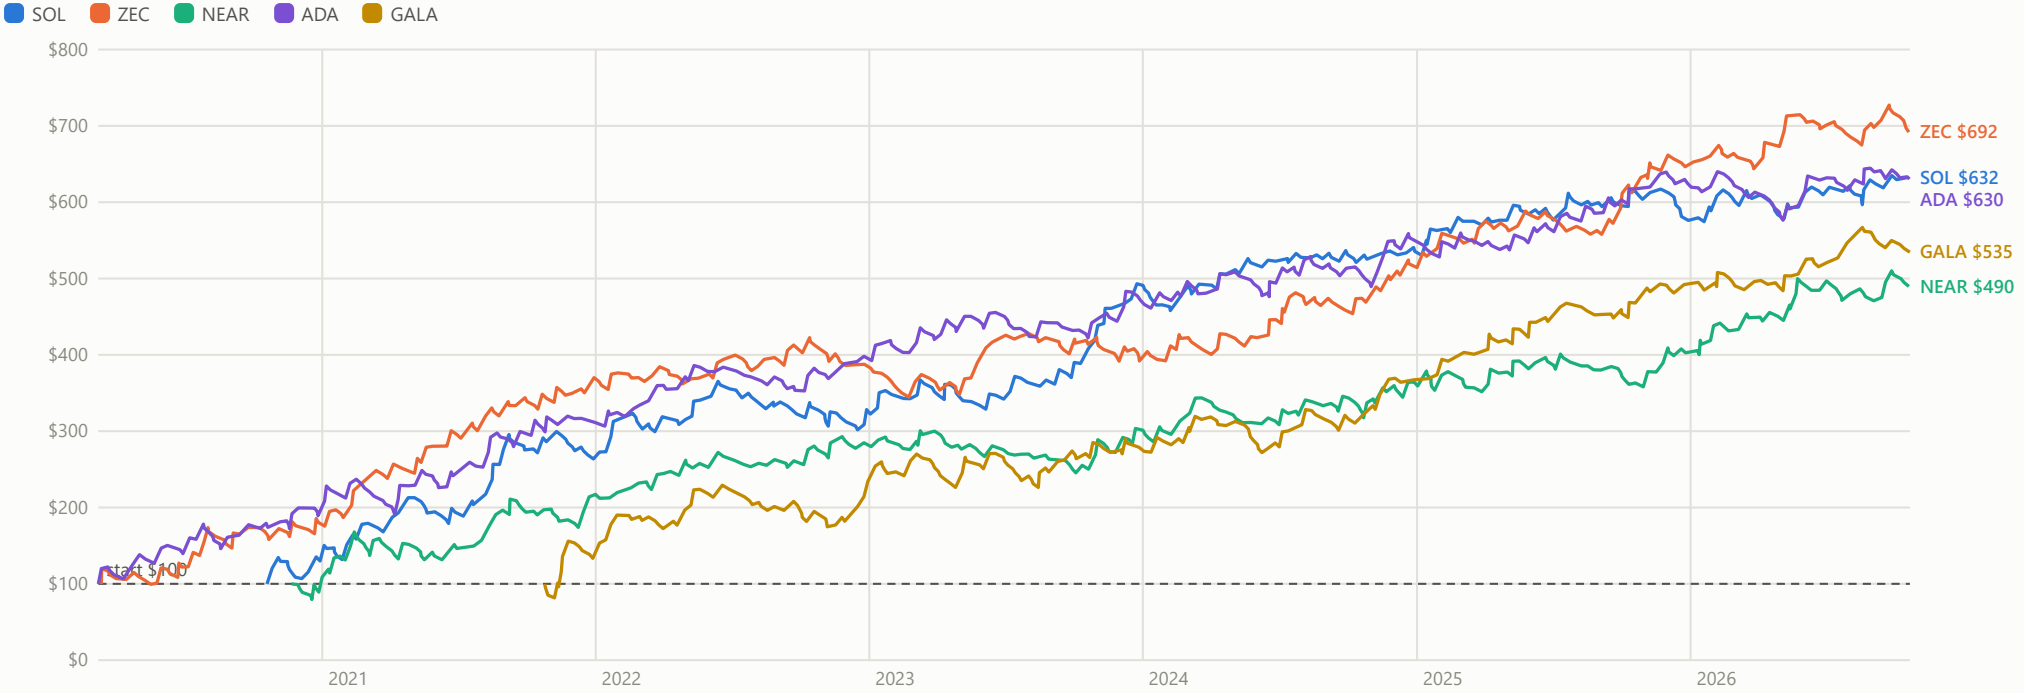

What is included

- **Trading fees**: 0.05% on market entry, stop and time exit; 0.02% on the take-profit limit order (Binance standard tier).
- **Slippage**: 0.02% worse price on every market fill. The take-profit only counts as hit if price goes 0.05% *through* it.
- **Funding**: the real Binance funding rate for every 8-hour payment the trade was open through.
- Binance USDT-M 4h candles. No compounding: the risk stays $5 even as balances grow. Server / API costs are not included (API use itself is free).

How to read this report: page 2 shows all coins together, pages 3–12 show each coin (yearly before/after balances, then every month), page 13 is the year-by-year total of all coins, page 14 is every month of all coins, page 15 is what to be prepared for, and page 16 is the overall result on the $500. 2026 = 1 Jan to 20 Oct 2026 only.

All 5 coins at a glance

Each coin starts with $100. Balance lines below are after every cost. The dashed line is the starting $100.

Coin	First trade	Trades	Win rate	Start	End	Profit	Growth	Max drawdown	DD % of peak	Lowest balance	Longest losing streak	Costs paid
SOL	19 Oct 2020	308	39%	$100.00	**$632.20**	**+$532.20**	+532%	−$63.82	17.5%	$100.00	8	−$61.06
ZEC	12 Mar 2020	332	39%	$100.00	**$691.75**	**+$591.75**	+592%	−$77.84	18.4%	$99.35	9	−$61.15
NEAR	21 Nov 2020	297	38%	$100.00	**$489.67**	**+$389.67**	+390%	−$55.46	18.4%	$79.49	7	−$50.71
ADA	8 Mar 2020	328	38%	$100.00	**$630.31**	**+$530.31**	+530%	−$63.46	9.9%	$100.00	9	−$65.66
GALA	24 Oct 2021	243	40%	$100.00	**$534.58**	**+$434.58**	+435%	−$54.45	23.8%	$81.70	9	−$32.44
All 5	8 Mar 2020	1508	39%	$500.00	**$2978.51**	**+$2478.51**	+496%	−$128.00	7.8%	$500.00	20	−$271.02

"Max drawdown" = the biggest fall from a high point to a later low. "Lowest balance" = the lowest the balance ever got from the $100 start. Win rate is low on purpose: most trades lose about $5, a few win about $20.

"Growth that year" = profit ÷ balance at the start of the year. "Growth on the $500" = profit ÷ the original $500 (comparable across years because the risk stays $5). 2020 and 2021 are partial for some coins (SOL from Sep 2020, NEAR from Oct 2020, GAL A from Sep 2021). * 2026 = 1 Jan → 20 Oct 2026.

All 5 coins combined — every month

Profit of the whole $500 account per month, after all costs. t = trades closed that month.

Months

- Losing months: **19 of 80** (24%)
- Best: **+$177.16** (2021-08)
- Worst: **−$71.99** (2022-07)
- Average month: **+$30.98** (+6.2% of $500)

Losing months in a row

Longest run of losing months for the whole account: **2**.

Why mixing coins helps

Single coins lose about 1 month in 3. Because coins rarely all lose in the same month, the combined account has fewer and smaller losing months.

Be prepared — the bad stretches

These all happened in the backtest and will happen again live. Knowing them in advance is what stops you from switching the bot off at the worst moment.

GALA	−$54.45	**$45.55**	9	2×
All 5	−$128.00	**$372.00** of $500	20	23×

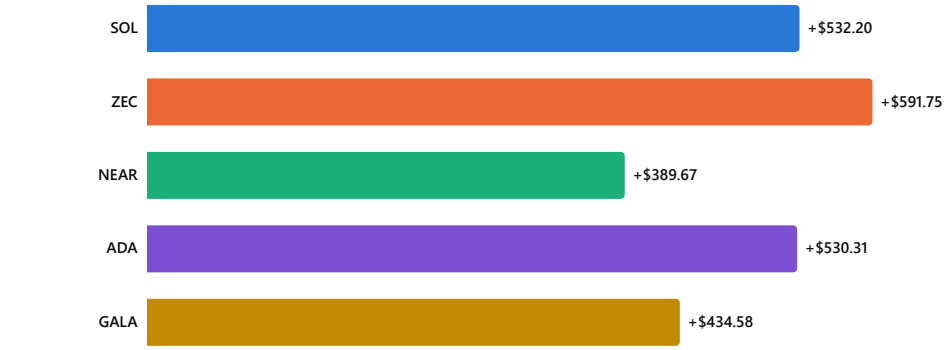

Rules to set before going live

- **Expect** a 20-trade losing streak and a −$128 drop on the $500 account at some point. Both are normal for this strategy.
- **Kill switch**: stop the bot if the $500 account falls about **2× the worst drawdown** from its high (≈ −$256). That would mean something changed.
- **$5 risk = 5% of each $100**. A single coin can lose 54–78% of its starting $100 in its worst stretch — only run it with money you can leave alone for months.
- **Judge it on 6–12 months**, not weeks. Roughly 1 month in 3 is a loss even when everything works.

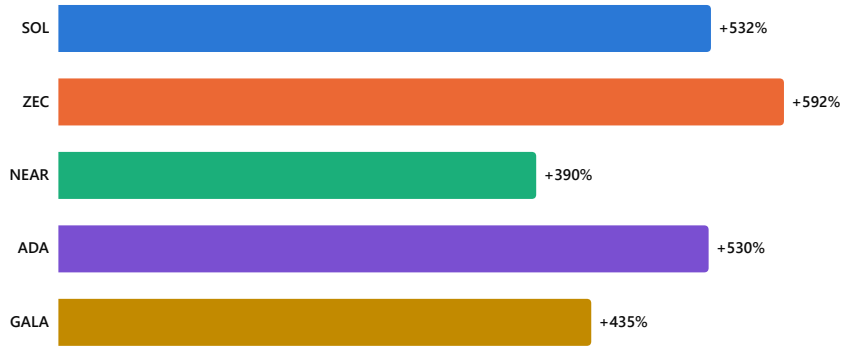

Overall result on the $500 capital

STARTING CAPITAL		ENDING CAPITAL	TOTAL PROFIT	TOTAL RETURN ON $500	AVERAGE PER YEAR
$500.00	→	**$2978.51**	**+$2478.51**	**+495.7%**	**+74.9%**

Profit by coin

Growth of each coin's $100

Where the money went

Gross profit (before costs)	+$2749.53
Trading fees	−$132.81
Slippage	−$50.82
Funding	−$87.39
Net profit	**+$2478.51**

Costs took 9.9% of the gross profit (≈ $0.18 per trade).

In numbers

- **1508** trades over 6.6 years (≈ 228 a year, ≈ 4.4 a week)
- Win rate **39%**; 242 trades hit the 4R target
- Every year profitable for the combined account (worst +$208.41)
- Max drawdown **−$128.00** (7.8%), longest losing streak **20**

Before you trust these numbers

- This is a backtest, not live trading. Real fills and bot downtime can make results worse.
- These 5 coins were picked *because* they did well. Across ~90 coins the average result since 2023 was about a third of these coins'. Expect live results to be lower.
- Profit is not compounded: risk stays $5 the whole time.
- Not included: server cost (~$5/month if you rent one), deposit/withdrawal fees, taxes.
